INCOME DISTRIBUTION, 1973-74
PART 1

PREFACE

In November 1974, information on the income of individuals and families in 1973-74 was sought from approximately two-thirds of the persons included in the population survey conducted in that month. Some preliminary results of the survey were published on 22 September 1975 in *Income Distribution 1973-74 (Preliminary)* (Reference No. 17.18).

2. The results of a similar survey conducted in November 1969 were published in *Income Distribution 1968-69, Consolidated and Revised Edition* (Reference No. 17.17).

3. The present publication contains particulars of the incomes of individuals for the year 1973-74 and provides estimates corresponding to those in most of the tables for individuals in the 1968-69 publication. Particulars of the incomes of families will be published in Part 2.

EXPLANATORY NOTES

The survey was based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.), in the six States, the Northern Territory and the Australian Capital Territory, and covered slightly less than one half of one per cent of the population of Australia. The information was obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers, the interviews being carried out during a four-week period.

2. The estimates relate to all persons 15 years of age and over, except persons in institutions, members of the permanent armed forces and certain diplomatic personnel customarily excluded from census and estimated populations. Questions were not asked of patients in institutions such as hospitals and sanatoria, and inmates of gaols, etc. for whom, for the purposes of the survey, the institution was regarded as their dwelling.

Interpretation of results

3. Since the estimates are based on a sample, they are subject to sampling variability. (See Technical Note, page 52 for further details.) In addition, they are subject to errors of response and reporting.

4. Interviewers engaged in obtaining information on income were instructed to ask respondents to refer to records wherever possible. However, in many cases the answers were based on memory, and frequently on the memory or knowledge of one person, generally the housewife. Some understatement in the estimates may be expected, because of imperfect recall of minor or irregular sources of income. Other errors may be due to genuine misunderstanding, or to misrepresentation.

5. Other points which should be kept in mind in interpreting the results of this survey are as follows :

- (i) For the purposes of the survey, income was defined to include (a) all income received while living in Australia, including income received from an overseas source and (b) all income received from an Australian source while living overseas.
- (ii) A person included in the survey in November 1974 who had lived outside Australia for the whole of 1973-74 was not asked the income questions. A person who had arrived in Australia towards the end of the reference year would have been recorded as receiving little or no income in Australia.
- (iii) The income received by a person does not necessarily reflect the standard of living of that person. For example, although alimony and maintenance payments were counted as income,

gifts or donations such as might be made by relatives were not included, even though such gifts or donations may have been the sole means of support. No account was taken of the possible run-down of assets accumulated in the past.

- (iv) Some individuals may have received no income in 1973-74. (They may, for example, have been at school or university.) In such cases income would have been recorded as nil.
- (v) Tables for "all income recipients" and "all income earners" include part-time workers and persons who worked for only part of the year (e.g. school leavers).

Definitions

6. **Income.** Questions were asked in respect of each person aged 15 years or over in the sample on the amount of income received in 1973-74 from each of the following sources : (1) money wages or salary; (2) own business, trade or profession (net income); (3) share in a partnership (net income); (4) government social service benefits; (5) superannuation or annuity; (6) interest, dividends, rent, etc.; (7) other sources, e.g. trust or will, maintenance or alimony.

7. **Income from wages or salary** was defined as gross income before taxation and other deductions were made. It included overtime and bonuses, gratuities and tips, fees and commission, and any contribution by the employer to the person's board or rent. Workers' compensation for temporary loss of wages was included, but compensation for an injury, for damage to personal property or for the reimbursement of medical fees was not regarded as income. Lump sum payments on retirement, living and travelling allowances, expense accounts, employers' contributions to superannuation or retirement funds and reimbursement of fees which were paid by the person for a training course were not regarded as income.

8. **Income from own business, trade or profession and income from a share in a partnership.** In both of these cases, net income was recorded. If no income had been received in 1973-74 or a loss had been made, or if all income had been retained in the business, income from these sources was recorded as nil. Where possible, the value of any goods taken from the business for use by individuals (for example, meat on a farm, food from a retail grocery) was included as income.

9. **Earned income** is income from wages or salary or income from own business, trade or profession or income from a share in a partnership or the sum of any of these components. Recipients of earned income are referred to as "income earners", or "persons with earned

income", as distinct from the all-inclusive term "income recipients", which refers to persons who received income from any source. It should be noted that "income earners" include some persons who were recorded as having earned income but for whom no duration of employment was shown. Many of these persons were reported as having received income from a share in a partnership.

10. **Income from government social service benefits** includes income from items such as :

- (i) Child endowment or maternity allowance
- (ii) Pensions (e.g. age, invalid, widows', war service, war widows')
- (iii) Unemployment, sickness or special benefits
- (iv) TB allowance
- (v) Rehabilitation payments
- (vi) Government educational scholarships, including Commonwealth and State scholarships and bursaries. (Fees paid directly by governments to educational institutions are excluded.)

11. **Income from superannuation or annuity** includes government and private pensions or retirement benefits paid to a retired person or his survivors by a former employer, either directly or through a superannuation fund, insurance company, etc. and periodic receipts from annuities or insurance. Any lump-sum payment received by a person on his retirement was excluded.

12. The category **interest, dividends, rent, etc.** includes interest on savings, bonds, debentures, etc., dividends from stocks and shares, net income from rental of a house or other property to others, and net royalties.

13. **Income from other sources** comprises income from items such as (i) private educational scholarships; (ii) maintenance or alimony; (iii) a trust or will. Income paid at regular intervals and received by a beneficiary under a will, settlement, deed, gift or instrument of trust was included. However, a 'once only' payment from any of these sources was not regarded as income. Private payments (including financial support from other family members, friends or charitable organisations) were not regarded as income. Any supplementation of income by run-down of accumulated assets was also not regarded as income.

14. **Full-time and part-time workers.** Persons were classified as either full-time or part-time workers on the basis of the kind of work in which they were mostly engaged during 1973-74, full-time work being defined as work occupying 35 hours or more per week.

15. **Full-year, full-time workers** are those who had worked in Australia for at least 50 weeks during the year 1973-74 and had been engaged mostly in full-time work. A person who had worked for 26 weeks full-time and for 24 weeks part-time would have been classified as a full-year, full-time worker; however, it should be noted that most persons who worked for a full year engage in either full-time or part-time work, but not in both.

16. **Full-year, part-time workers** are those who had worked in Australia for at least 50 weeks during the year 1973-74 and had been engaged mostly in part-time work.

17. **Part-year, full-time workers** are those who had worked in Australia for less than 50 weeks during the year 1973-74 and had been engaged mostly in full-time work. A person who had worked for 25 weeks full-time and for 24 weeks part-time would have been classified as a full-time worker; however, it should be noted that most persons who work for less than a year engage in either full-time or part-time work, but not in both.

18. **Part-year, part-time workers** are those who had worked in Australia for less than 50 weeks during the year 1973-74 and had been engaged mostly in part-time work.

19. **Post-school qualifications** comprise degrees and post-graduate diplomas from Universities and Colleges of Advanced Education (shown in Tables 27, 28 and 30 as degree level), tertiary qualifications other than degrees and post-graduate diplomas (shown as non-degree tertiary level), technician level, trade level and other qualifications. Apart from degrees and post-graduate diplomas, the levels were determined as follows :

Non-degree tertiary is a level relating to qualifications obtained following substantial advanced study beyond matriculation, conferred by institutions and professional associations, e.g. Associate of Australian Society of Accountants, Diploma in Business Studies, Teaching Certificate, Diploma of Engineering.

Technician is a level which requires theoretical knowledge, as well as practical skills, e.g. wool-classing or nursing. Certificates issued by technical colleges following periods of 4 or 5 years part-time study after passing intermediate or final secondary school examinations are classified as 'technician'.

Trade is formal recognition of competence in a skilled manual occupation which is usually obtained through an apprenticeship and satisfactory progress in part-time studies concurrently with practical training (e.g. plumber, fitter, compositor, carpenter, hairdresser).

Other refers to those qualifications which could not be classified to any of the above levels. Most of these relate to short specialised courses in such fields as typewriting and shorthand, farm book-keeping, dressmaking and automotive maintenance.

20. **Median income** is the amount which divides the distribution into two equal groups, one having incomes above the median and the other having incomes below it. Medians were calculated from grouped data with linear interpolation being used within the class interval in which the median fell.

21. **Mean income** is the amount obtained by dividing the total income of a group (e.g. income earners, income recipients) by the number of units in that group.

22. **Gini index of concentration.** This is one of the most widely used measures of inequality of income distribution. In the diagram on page 10 Lorenz curves have been drawn, showing cumulative percentages of males and females plotted against cumulative percentages of aggregate individual income. It can be seen from these curves, for example, that the lowest 10 per cent of males received only 1.5 per cent of the aggregate income of males. It should be noted, however,

that the distribution of females is affected by the large number of females with incomes below \$200 (mainly those in receipt of child endowment payments).

23; The 'egalitarian line' shows the hypothetical situation in which all individuals receive the same income. The Gini index of concentration is the ratio of the area between the egalitarian line and the Lorenz curve to the area of the triangle below the egalitarian line. The index, always between 0 and 1, is low for populations with relatively equal income distributions and high for populations with relatively unequal distributions.

Rise in the level of average earnings since 1973-74

24. The rise in incomes since the year 1973-74 has been considerable. However, the findings of the survey with regard to dispersion and relativity between different sources, different age groups and groups with different qualifications will still be valuable. As a measure of the rise, average weekly earnings per employed male unit (a series which refers only to wage and salary earners and which is published quarterly in a mimeographed statement, *Reference No. 6.18*) may be used as a rough guide. Average weekly earnings in 1973-74 were \$118.00 and for the December quarter 1975 were provisionally placed at \$166.00 (seasonally adjusted), a rise of 41 per cent.

SUMMARY OF RESULTS

All income recipients

The total number of persons receiving income of any kind in 1973-74 was estimated to be 8,732,500 (4,466,800 males and 4,265,600 females). The median total income for males was \$5,380 and for females \$1,370, while the mean total income for males was \$5,710 and for females \$2,160. Note that government social service benefits such as child endowment payments to females, are included in total income.

2. A large number of males received between \$1,000 and \$1,400 (the interval which included the maximum age pension). Male incomes reached their greatest frequency of 392,800 (8.8 per cent of male income recipients) in the \$5,000 to \$5,500 interval. There were large numbers of females receiving incomes below \$200 (mainly those in receipt of child endowment payments), and between \$1,200 and \$1,400 (the interval containing the maximum age pension and standard widow's pension). Of the females receiving below \$200, approximately 36 per cent were in the 25 to 34 year age group. The mean total income was highest for males aged 45 to 54 years (\$7,140) and for females aged 20 to 24 years (\$2,580).

3. The quintiles, that is, the points dividing the successive fifths of the total income distribution, were as follows :

	<i>Per cent of persons receiving incomes below the levels shows</i>	<i>Income level (\$)</i>	
		<i>Males</i>	<i>Females</i>
1st quintile	20	2,580	190
2nd quintile	40	4,750	1,160
3rd quintile	60	6,080	2,000
4th quintile	80	7,910	3,860

4. There were 3,353,100 males and 1,968,400 females whose principal source of income was wages or salary. These figures represent 75 per cent of all male income recipients and 46 per cent of all female income recipients respectively. For nine per cent (415,700) of male income recipients and 41 per cent (1,748,200) of female income recipients government social service benefits were the principal source of income.

Persons with earned income

5. Individuals receiving earned income comprised 4,001,500 males and 2,361,400 females. Median earned income for males was \$5,610 and for females \$2,910; the mean earned incomes were \$5,990 and \$3,060 respectively.

Persons with unearned income

6. There were 684,700 males and 2,757,400 females who received some form of government social service benefit in 1973-74; their median incomes from this source were \$1,070 and \$180 respectively and their mean incomes \$980 and \$490. A concentration of males occurred in the range \$900 to \$1,300 (which included the maximum age pension), while for females peaks in the distribution occurred within the intervals in which child endowment payments for one child and for two children were contained and in the maximum age pension and standard widow's pension intervals. Income from interest, rent, dividends, etc. was received by an estimated 1,354,100 males and 1,116,100 females. These incomes were mainly small amounts of savings bank interest, over 60 per cent being amounts under \$100. Experience has shown that income of this kind is especially liable to be understated in income surveys.

7. Government social service benefits were the principal source of income for approximately 75 per cent of the 557,300 males and 86 per cent of the 2,033,700 females whose principal source of income was unearned income. The low median and mean unearned incomes for females were primarily due to the large number of women in receipt of child endowment payments. The effect of these payments on female incomes in tables for all income recipients and persons with unearned income can be gauged by comparing the median and mean incomes from these tables with those of female wage and salary earners, where child endowment payments are excluded.

Full-year, full-time workers

8. There were an estimated 3,292,400 male and 1,099,800 female full-year, full-time workers in employment during 1973-74. The median total income for males was \$6,140 and for females \$4,140, while the mean total incomes were \$6,780 and \$4,400 respectively. Full-year, full-time workers represented approximately 75 per cent of all male income recipients and 25 per cent of all female income recipients.

. Age. The mean total income for males advanced from \$3,180 in the 15 to 19 year age group to \$7,520 in the 45 to 54 year age group and thereafter remained fairly stable (at approximately \$6,700). For females the mean total income rose from \$2,690 for those aged 15 to 19 years to its highest level of \$5,020 in the 25 to 34 year age group. This latter age group contained approximately one-quarter of both male and female full-year, full-time workers.

Education. The number of full-year, full-time workers with post-school qualifications was estimated to be 1,474,800 (1,178,000 males and 296,800 females). These figures represent approximately 36 per cent and 27 per cent respectively of all male and female full-year, full-time workers. The relationship of total income to level of educational qualifications is demonstrated by the fact that mean total income for those with post-school qualifications (\$8,050 for males and \$5,530 for females) was considerably higher than for those without such qualifications (\$6,080 and \$3,980 respectively). Persons with degrees recorded the highest mean income (\$11,370) and those who had left school at 16 years of age the lowest (\$5,350). The mean total income for males aged between 35 and 44 years with a degree (\$13,240) was approximately twice that for males in the same age group who had left

school at 14 or 15 years of age (\$6,340). Similarly, of females in the 35 to 44 years age group those with degree qualifications averaged \$8,430 while those who had left school at 13 years of age or under had a mean total income of \$3,890.

Occupation. Mean earned incomes of full-year, full-time workers showed wide variations between occupations. For males, they ranged from \$5,770 for service, sport and recreation workers and \$5,790 for tradesmen, production-process workers and labourers, n.e.c. to \$9,520 for professional, technical and related workers. For females, mean earned incomes ranged from \$3,420 for sales workers to \$5,760 for those in the professional, technical, administrative, managerial, etc. group. Forty-four per cent of all male full-year, full-time workers were in the tradesmen, production-process workers and labourers, n.e.c. group and thirty-eight per cent of females were clerical workers, having a mean earned income of \$4,230.

COMPARISON OF ESTIMATES FOR 1968-69 AND 1973-74

When interpreting income movements between the two surveys account should be taken of the change in money values that has occurred over the period. (See page 5, paragraph 24.) In the comparisons outlined below no attempt has been made to adjust for such changes.

All income recipients

2. Between 1968-69 and 1973-74 mean total incomes increased by 68 per cent for males (from \$3,390 to \$5,710) and by 85 per cent for females (from \$1,170 to \$2,160) while median total incomes increased by 76 and 85 per cent respectively. The proportionally greater increase in female earnings probably reflects, among other things, the increased incidence of equal pay for women.

3. The pie diagrams on page 11 show, for the two survey periods, the percentages of income recipients by principal source of income. The largest change occurred amongst those whose principal source of income was interest, dividends, rent, etc., where the proportion decreased from 4.6 per cent in 1968-69 to 3.5 per cent in 1973-74.

4. Male income recipients in the 25 to 34 year age group had the highest increase (76 per cent) in mean total incomes while those aged 65 and over showed the lowest increase (41 per cent). For females the highest and lowest increases were 107 per cent in the 25 to 34 year age group and 61 per cent in the 60 to 64 year age group respectively.

Persons with earned income

5. Persons with earned income and classified as full-time workers increased from 4,935,800 in 1968-69 to 5,433,600 in 1973-74, a rise of approximately 10 per cent. Part-time workers rose from 563,200 to 841,600, an increase of 49 per cent. In both years about 80 per cent of female part-time workers were married.

6. Persons who received income from wages or salary in 1973-74 numbered 5,564,000, compared with 4,898,000 in 1968-69. Males in this category increased by 9 per cent (from 3,181,400 to 3,464,000) and females by 22 per cent (from 1,716,600 to 2,100,000). The mean wage or salary income for males rose by approximately 76 per cent (from \$3,290 to \$5,780); for females the increase was 89 per cent (from \$1,530 to \$2,890).

7. There were 437,800 persons with income from own business, trade or profession in 1973-74, an increase of 37,300 over the figure in 1968-69. The mean income for this group rose from \$3,230 in 1968-69 to \$5,420 in 1973-74 (i.e. by 68 per cent). The number of persons with income from a share in a partnership increased from 534,800 to 765,500; mean income increased by 46 per cent from \$3,240 to \$4,730.

Persons with unearned income

8. In 1968-69 there were 295,400 males and 1,573,400 females whose principal source of income was government social service benefits. In 1973-74 the numbers had increased to 415,700 and 1,748,200 respectively. Mean and median unearned incomes for males increased by 67 per cent and 69 per cent respectively, while for females the corresponding increases were 85 per cent and 95 per cent. The number of persons reporting interest, dividends, rent, etc., as their principal source of income declined from 357,000 to 309,600. Decreases were also recorded for persons whose principal source of income was superannuation or annuity (80,700 to 68,100) or other sources (52,200 to 49,400).

Full-year, full-time workers

9. **Age.** In 1968-69 the highest mean total income for male full-year, full-time workers was reported for males aged between 35 and 44 years (\$4,390) whereas in 1973-74 the highest mean total income (\$7,520) was for males aged 45 to 54 years. Female full-year, full-time workers aged 60 years and over had the highest mean total income in both 1968-69 (\$2,630) and 1973-74 (\$4,830). Mean total income for all male full-year, full-time workers was \$3,900 in 1968-69 and \$6,780 in 1973-74 (a 74 per cent increase) while for all female full-year, full-time workers mean total incomes were \$2,210 and \$4,400 respectively (a rise of 99 per cent).

Occupation. While the highest mean earned income for males in both 1968-69 and 1973-74 was recorded for those employed in professional, technical, etc. occupations, the percentage increase (59 per cent) between the surveys was the lowest amongst all occupation groups. The largest percentage increase in mean earned income (approximately 89 per cent) was recorded for male workers in transport and communication occupations (from \$3,380 in 1968-69 to \$6,390 in 1973-74). Females in professional and administrative, etc. occupations had the highest mean earned income in both 1968-69 and 1973-74 (\$2,760 and \$5,760 respectively), and the greatest percentage increase (109 per cent) between the two

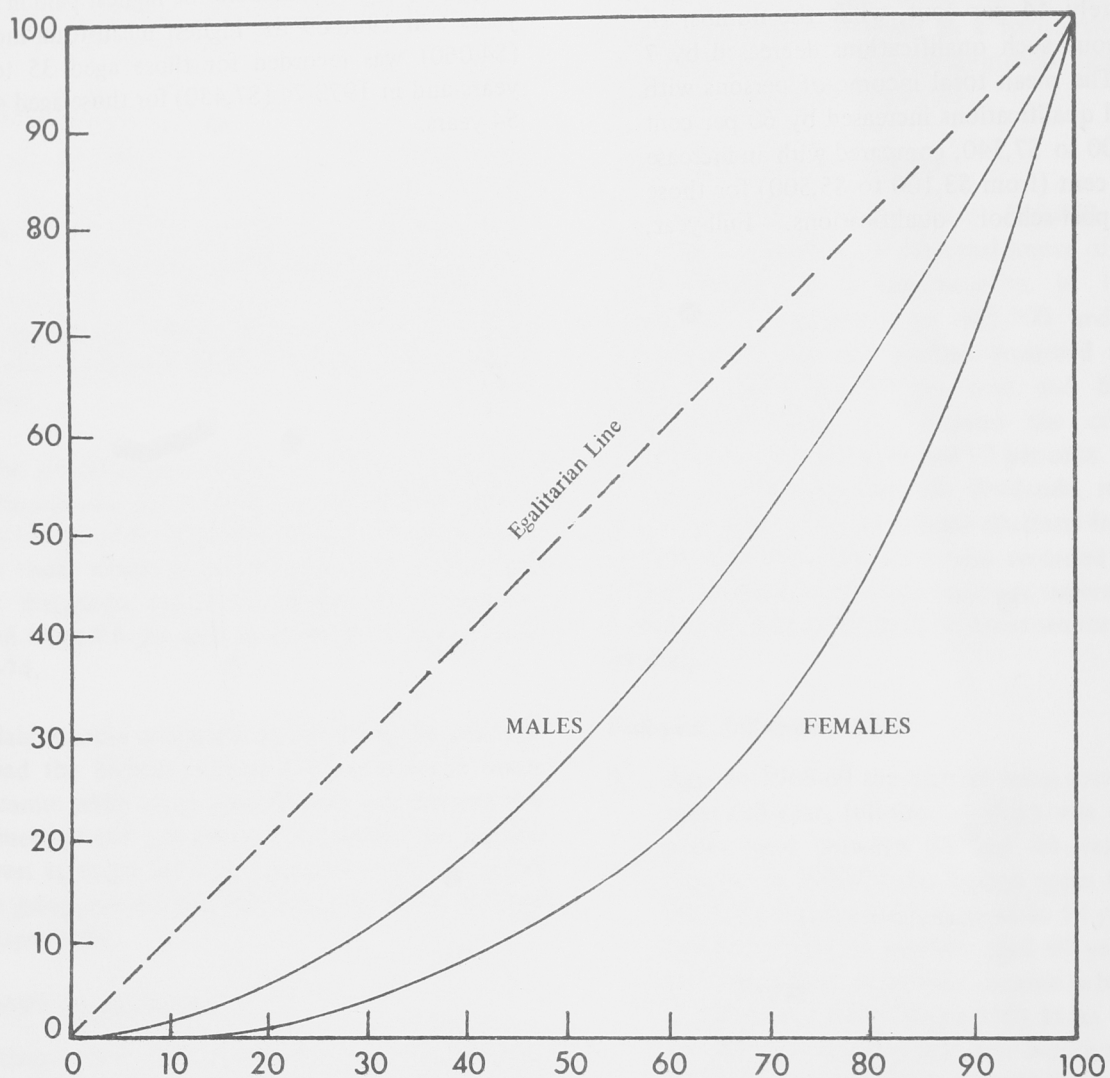

years. The lowest percentage increase (86 per cent) for females was recorded for sales workers.

Education. Between 1968-69 and 1973-74 the number of full-year, full-time workers with post-school qualifications increased by approximately 44 per cent, while the number of those without such qualifications decreased by 7 per cent. The mean total income of persons with post-school qualifications increased by 60 per cent from \$4,700 to \$7,540, compared with an increase of 77 per cent (from \$3,100 to \$5,500) for those without post-school qualifications. Full-year,

full-time male workers aged between 45 and 54 years of age with degree qualifications were the highest paid workers in both 1968-69 and 1973-74, with mean total incomes of \$10,320 and \$14,640 respectively. Females with degree or non-degree tertiary qualifications were the highest paid in both years : in 1968-69 the highest mean total income (\$4,060) was recorded for those aged 35 to 44 years and in 1973-74 (\$7,450) for those aged 45 to 54 years.

ALL INCOME RECIPIENTS : DISTRIBUTION OF INCOME,

1973-74

DECILES

Percent of Persons	<u>Per cent of Aggregate Income</u>	
	Males	Females
10	1.5	0.5
20	4.9	0.9
30	11.0	2.6
40	19.2	7.1
50	28.6	13.0
60	39.2	20.5
70	51.2	31.6
80	64.8	47.7
90	80.8	68.1
100	100.0	100.0

Gini index of concentration. For definition see page 5 paragraph 22. The calculated values of the index using the diagram above, are 0.30 for males and 0.52 for females.

Total	2,806.2	1,022.2	3,828.5	976.5	628.6	1,605.2	3,782.8	1,650.8	5,433.6
PART-TIME WORKERS (g)									
Under 15 (e)	13.0	26.8	39.8	99.4	31.7	131.2	112.5	58.5	171.0
15 – 29	10.7	13.1	23.8	88.8	23.8	112.6	99.5	36.9	136.4
30 – 39	6.3	5.7	12.0	41.1	12.6	53.7	47.5	18.3	65.8
40 – 49	8.6	8.8	17.4	64.1	13.2	77.3	72.7	21.9	94.7
50 – 52	36.9	34.5	71.4	256.7	45.6	302.3	293.7	80.1	373.8
Total	75.6	88.8	164.5	550.2	126.9	677.1	625.8	215.8	841.6
Total	2,888.9	1,112.6	4,001.5	1,597.9	763.5	2,361.4	4,486.8	1,876.1	6,362.9

(a) For definitions see page 3. (b) Includes de facto relationships. (c) Includes never married, widowed and divorced. (d) Persons who worked mostly full-time. (See Explanatory Notes, paragraph 14). (e) Excludes persons recorded as having earned income but for whom no duration of employment was recorded. Many of these persons reported that they received income from a share in a partnership. (f) Full-year, full-time workers. The estimates differ from those published in Table 23, 24, 25, 26 and 27 because they exclude persons whose earned income for 1973-74 was nil, or who made a loss. (g) Persons who worked mostly part-time. (See Explanatory Notes, paragraph 14).

Estimation procedure

The estimates are derived from the quarterly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

Reliability of the estimates

2. Since the estimates in this statement are based on a sample they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

3. Space does not allow for the separate indication of the standard errors of all estimates in this statement. A table of *standard errors* for general application is given below. These figures will not give a precise measure of standard error of a particular estimate since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics. However, they will provide an indication of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of the table is as follows : if an estimate for Australia obtained from the sample is 100,000 and the standard error is 5,000, there are about two chances in three that the true figure is within the range 95,000 to 105,000 and about nineteen chances in twenty that this figure is between 90,000 and 110,000.

4. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. However, the per cent standard error of the estimated percentage will generally be lower than the per cent standard error of the estimate of the numerator. The per cent standard errors of the numerators can be obtained from the table below.

5. Medians and means published in this bulletin are also subject to sampling variability. Estimated relative standard errors of these medians and means are all less than five per cent.

6. As the standard errors in the table below show, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this statement, estimates below the levels shown in the table below have not been included. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

7. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

STANDARD ERRORS OF ESTIMATES (a)

Size of estimate (persons)	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Australia	
									Number	per cent of estimate
1,500						250	300
